

# Product Data Sets

Verify the legitimacy of dietary supplements, pharmaceuticals, and other healthcare products with convenient access to LegitScript's full product data set.

In a world where regulators, banks, and internet platforms carefully scrutinize dietary supplements, designer drugs, and pharmaceuticals, it's hard to know which products are noncompliant with the FDA, FTC, and their foreign counterparts. And with tens of thousands of products on the market, it's hard to stay on top of regulators' views regarding what marketing claims are compliant and which are not. With Product Data Sets you get full access — and ongoing updates — to LegitScript's entire data set of problematic products, ingredients, and their approval statuses. This same information is used by the world's largest internet and e-commerce platforms.

## Why use Product Data Sets?

### Advertise with Confidence

Unexpected barriers preventing the launch of your online ad campaign can be frustrating to deal with. Confidently check whether your supplement products and ingredients are permissible to advertise online by referencing the same data set used by Google, Facebook, Bing, and others.

### Rely on Comprehensive, Up-to-date Data

Keeping track of new product regulations and regulator views on marketing can be difficult. That's why we deliver data in a convenient spreadsheet format that can be easily filtered, sorted, and matched. You receive twice monthly updates, so you always have the most up-to-date information to work from.

### Get International Coverage

If you are selling supplements in different countries, you need data that gives you global insight. LegitScript's database covers regulatory information from 60 countries and 115 government agencies. Product classifications can be global or country-specific so you know what products are permissible and where.

### Work with Trusted Data

LegitScript data is trusted by the world's largest internet and e-commerce platforms around the world, including Google, Facebook, Amazon, and more.

On a daily basis, LegitScript obtains information from dozens of global regulators about illegal, fraudulent, or unsafe supplements and related products.

LegitScript is trusted by the world's largest advertising and e-commerce platforms, including:

- Google
- Facebook
- Amazon
- Pinterest
- Microsoft
- And more!

## Information Covering 47,000+ Problematic Products

Data is delivered in a convenient spreadsheet format that can be easily filtered, sorted, and matched depending on your organization's needs. Data points include:

- **Product name**
- **Manufacturer**
- **What it is**  
(e.g., dietary supplement, cosmetic, psychoactive high, etc.)
- **Whether it is a controlled substance, and in which countries**
- **LegitScript categorization**  
("Red Flag," "Yellow Flag")
- **Global and country-specific notes**
- **Regulatory authority, if any**  
(includes links to warning letters and other regulatory actions)
- **And much more**

## How it Works

LegitScript's entire data set of problematic products is available only to a limited number of private enterprise companies, including supplement merchants and retailers on an invitation-only basis.

As part of your one year subscription, you will first receive the full data set of problematic products. You will then receive twice monthly updates that clearly separate out all new products added since the last report as well as significant changes made to existing products.

The report contains a comprehensive list of products and ingredients, categorized globally and by individual country.

Products are identified as either having illegal or unsafe ingredients (categorized as "Red Flag"), or making problematic marketing claims of the type that can draw scrutiny from the FDA or FTC (categorized as "Yellow Flag.")
